FULL WORKING EXPLANATION (CHRONOLOGY)

- Users can Login/signup as college and student from landing page
- Users can enquire through the get in touch box

- Upon Successful login 1st time users will be directed to profile page to retrieve all the information and upon successfully submitting the profile they are taken to the personalized dashboard
- Students already having a profile will be directly redirected to the dashboard

- The student dashboard consists of the all the info of the student with displaying of eligible colleges and quick action area to perform useful actions – such as editing the info and checking spot round dates for their eligible colleges

- Students account which are not verified will not be able to see the colleges list. Only after admin verifies the info of a particular student the student will be able to see the list of the eligible colleges

- The Eligible colleges section also comes with filter option where students can filter out their eligible colleges based on location.

- Each College has an apply now button where students can apply onto the college and that info directly reaches to the admin server.

- One student cannot apply to the same college more than once
- In the admin Portal There are two sections "Manage Student" "Manage College" .
- The manage Student Displays all the students registered and all their info including their marksheet for verification , it allows the admin to manipulate the info of the students.
- It also displays which student applied to which college
- There is also a verify button which verifies a particular student which inturn allows the student to see the eligible collges list and use other functionalites.

- The manage college section has a graph which shows the college and their number of seats
- It also displays the list of registered colleges with the functionality of editing and deleting by the admin

- The college Profile works in the similar fashion where colleges can fill in their info in the form.
- Each college can have multiple courses

- All the changes are incorporated dynamically
- There is light mode and dark mode feature implemented throughout the project
- The whole website is mostly responsive
